RIVER DOUGLAS BRIDGE

APPENDIX E - TOPOGRAPHICAL SURVEYS

A new topographical survey of the river bank, railway embankment and flood bank on the East side of the river has been carried out. This extends to the West bank at the bridge site. A cross section at the bridge site has been drawn and a cross section has also been taken at the pipe bridge upstream of the bridge site. This information is included in both dwg, gen and pdf formats.

A survey of the West side of the river was carried out in 2002. This is included in pdf format only.
